SUMMARY

Full Stack & Independent Game Developer building scalable backend systems, real-time applications, and commercial game products. Delivered end-to-end systems across web, cloud, and game development, including Steam titles with 150K+ players and 5K+ sales. Strong focus on performance, system design, and automation.

TECHNICAL SKILLS

Languages: PHP, Python, TypeScript/JavaScript, C++, C#, SQL **Frameworks & Engines:** Laravel, Django, Vue, React, Godot, Unity **Backend & Systems:** REST APIs, WebSockets, Microservices, Supabase **Databases:** PostgreSQL, AlloyDB, MySQL, MariaDB **DevOps & Tools:** Docker, Kubernetes, Ansible, Kafka, Git, Linux, Prometheus, Grafana, Retool **Cloud & Infra:** AWS, GCP, Azure, Hyper-V, OpenStack, ESXi

EXPERIENCE

Lead Infrastructure and Support Engineer – RxFoundry

Apr 2026 – Present

- Lead cloud infrastructure, platform reliability, and operational automation for healthcare technology systems on GCP
- Manage Kubernetes deployments, Infrastructure as Code (Ansible), PostgreSQL/AlloyDB, and Kafka event streaming
- Built custom Grafana observability dashboards (Prometheus, Telegraf) and incident management workflows via incident.io

Founder / Indie Game Developer – BearlikeLion

Jan 2024 – Present

- Launched 2 commercial Steam games reaching 150K+ players and 5K+ unit sales
- Built full-stack game architecture: C++ Godot engine extensions + Laravel backend for real-time systems
- Developed anti-cheat system and telemetry pipeline processing 50K+ sessions for balancing and anomaly detection
- Owned full lifecycle: design, backend infrastructure, release, and live operations

Senior Software Engineer – Lumion (formerly Mia Share)

Apr 2025 – Aug 2025

- Designed and scaled Laravel backend systems, improving data consistency and team velocity
- Integrated OpenAI-powered chatbot with dynamic document generation and query classification
- Built real-time backend architecture for AI-driven customer support workflows

Full Stack Developer – xo, Fetti

Aug 2024 – Jan 2025

- Architected Laravel + Vue platform aggregating real-time sales/inventory across Amazon, Etsy, and Shopify

Automation Engineer – Walmart Global Tech (Contract)

Aug 2023 – Jun 2024

- Built observability tooling for enterprise backup systems using Prometheus + Grafana
- Extended Commvault APIs with custom exporters for real-time monitoring and alerting

Personalization Engineer – Commvault (Contract)

Dec 2022 – Jun 2024

- Developed automation workflows and integrations (Azure KeyVault, Exchange Online)
- Built virus scanning pipeline for backed-up data across enterprise environments

Senior Support Engineer – Truepill

Dec 2021 – Oct 2022

- Resolved critical production issues; built PostgreSQL functions and internal tooling (Retool)
- Acted as 24/7 escalation engineer bridging support and engineering

EARLIER EXPERIENCE

OwnBackup – Tier-4 Support Engineer (2021)

- Automated issue resolution with Python; performed root cause analysis on Salesforce backup systems

Commvault – Support → Automation Engineer (2016–2020)

- Fastest promotion to Tier-2; awarded Innovator Award (CVGL log system)
- Reduced test suite runtime 67% via parallelization and multi-threading
